INTRODUCTION

The scenarios in the All Out War Scenario Pack allow three or more players to take part in a game of Trench Crusade.

To play an All Out War scenario, you will need to recruit a Warband (▸ see page 9 of Warbands of Trench Crusade), find at least two other opponents, and then decide which All Out War scenario you and your opponents want to play. If you're playing a campaign game, you can agree to use an All Out War scenario instead of a scenario from the Campaign Scenario table.

You can either choose which All Out War scenario you want to play or roll a D6 and refer to the All Out War Scenario Table that follows to pick out the scenario that will be used. Once you've selected the scenario, it is set up and played in the same way as a scenario from the Trench Crusade Rulebook or Digital Rulebook, unless stated otherwise in the following rules.

All Out War Scenario Table

Roll	Scenario
1-2	The Looters
3-4	Brothers-In-Arms
5-6	Alliance & Betrayal

Multiplayer Game Rules

The following special rules apply in any game that has more than two players.

THE PLAYING CARDS

To play a multiplayer game, you will need a standard deck of cards. Remove the Jokers, so the deck has 52 cards. We recommend using smaller "Patience"-sized cards, if you have access to them, to cut down on table clutter.

At the start of the game, shuffle the deck and place it facedown within easy reach of all of the players. If the deck is ever exhausted, take all of the discarded cards, shuffle them together, and place them facedown to create a new deck to take cards from.

The Draw

The rules for roll-offs in the Trench Crusade Rulebook won't work in games with more than two players. Instead, when the players are called to make a roll-off, they must make a draw instead. To make a draw, each player draws a card from the deck and reveals it. The player with the highest card wins the draw, the player with the second-highest card is second, and so on.

Card Ranks

Card ranks from highest to lowest are Ace (A), King (K), Queen (Q), Jack (J), 10, 9, 8, 7, 6, 5, 4, 3, and 2. If cards are tied, then the higher-ranked card is determined by the card suit, in the following order of priority:

♠ > ♥ > ♦ > ♣

GAME TURNS

The way that Initiative works and the order in which the players Activate their models is different in a multiplayer game.

Determining Initiative

Do not count the number of models in the players' Warbands to determine the Initiative. Instead, in the Initiative Phase, each player must draw a card. These cards are called Initiative cards. At the end of the Turn, the Initiative cards are discarded, and new cards will be drawn to replace them in the following Turn's Initiative Phase.

Whenever during a Turn you need to determine which out of two or more players has the Initiative, simply compare the Initiative cards of each of the players. The player with the highest card has the Initiative.

Activation Phase

In the Activation Phase, the players Activate models one at a time, in order of the value of their Initiative cards. The player with the highest Initiative card Activates one model, then the player with the second-highest card, and so on. Once all the players have Activated a model, start the sequence again, beginning with the player with the highest Initiative card. Once a player has Activated all of their models, they drop out of the sequence. Once all the players have Activated their models, the Activation Phase ends.

> We recommend that you keep your Initiative card face-up in front of yourself when it is drawn, and then flip it face-down when you Activate a model. Once all the players have taken an Activation, you can turn your card face-up again, and a new sequence of Activations can begin.

Enemy Models

Unless stated otherwise, all the models from Warbands other than your own Warband are enemy models.

Morale Phase

If your Warband flees in a multiplayer scenario, then all of your surviving models are removed from the battlefield, and you are out of the game. Any remaining players can carry on with the game as normal. You win a multiplayer game if all the opposing Warbands have fled.

Blood Markers

If a model has any **BLOOD MARKERS**, then any enemy player can choose to spend them to add **-1 DICE** to a Success Roll that the model is trying to make. However, only a player that is making an attack on the model can spend **BLOOD MARKERS** to add **+1 INJURY DICE** to an Injury Roll or to change the Injury Roll into a Bloodbath Roll. If an Injury Roll is not caused by an attack (Falling, for example) then any enemy player can spend **BLOOD MARKERS** to add **+1 INJURY DICE** to the roll.

Note that only enemy players can spend **BLOOD MARKERS** that are beside a model; players that are part of the same Battle Team or an Alliance are not allowed to do so unless they are Court players using **BLOOD MARKERS** to cast a Goetic Spell.

The Looters

Scattered crates laden with supplies litter the centre of the battlefield, and Warbands clash to capture as much of the loot as possible.

MULTIPLAYER SCENARIO

The Looters is a multiplayer scenario that can be played by three to eight players.

FORCES

No special restrictions apply to the models the players can include in their Forces in this scenario.

THE BATTLEFIELD

The players make a draw, and the winner sets up the terrain for the game. This scenario uses the No Man's Land battlefield archetype and requires a battlefield that is 48" by 48".

Supply Crate Markers

After the terrain has been set up, the players must set up 2 Supply Crate Markers. The player who won the draw sets up 2 Markers first, then the player who came second sets up 2 Markers, and so on. Supply Crate Markers must be set up wholly within 12" of the centre of the battlefield and more than 1" away from any other Markers or Impassable terrain. In addition to these restrictions, each player must place the second Marker they set up more than 12" from the first Marker they set up. If it is impossible to set up a Supply Crate for any reason, then it is discarded and is not used.

DEPLOYMENT

First the players must divide their Warbands into two groups, one called the vanguard and the other called the reserve. There must be at least 1 model in each group, and there cannot be more models in the vanguard than there are in the reserve.

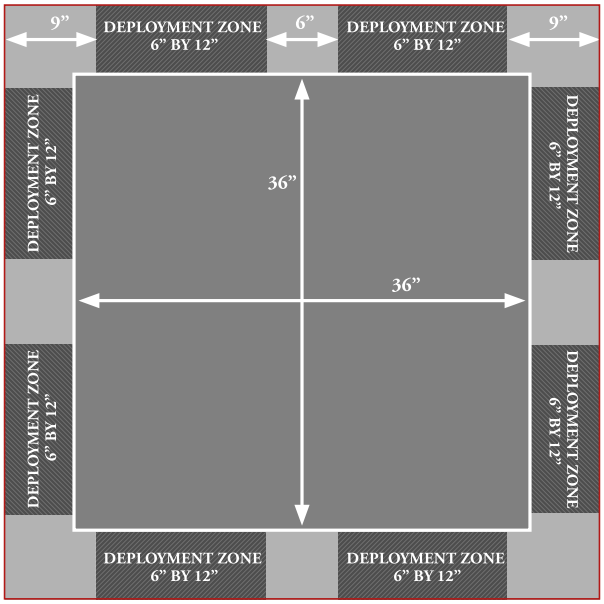

The players then make a draw. The winner of the draw chooses which Deployment Zone will be theirs and then deploys their vanguard so all the models are wholly within the Deployment Zone. Then the player who came second in the draw chooses a Deployment Zone and deploys their vanguard, and so on. When all the players have deployed, the first Turn of the game can start.

The Reserve

Models from the reserve are placed off the battlefield. They cannot attack or be attacked and cannot use any Abilities, Battlekit, or Skills until they are deployed. Reserve models that have not yet been deployed are considered part of the Warband for the purposes of Morale Checks.

Infiltrators

Infiltrators must deploy normally (they cannot use their special deployment rules).

THE DEATH ZONE

Machine-gun batteries and snipers have been assigned to keep each Warband's Deployment Zone free of enemy troops. To reflect this, models treat the battlefield and terrain within 1" of an enemy Deployment Zone as Impassable terrain.

THE SUPPLY CRATES

A model within 1" of a Supply Crate Marker can take an Open Crate **ACTION**.

- Open Crate **ACTION**. If it does so, choose one of the following three options for the model (you do not have to take a Success Roll):

1. Carry Crate: Put the Supply Crate Marker in contact with the model's base to show it is carrying it. The only **ACTIONS** a model carrying a crate can take are Move or Retreat **ACTIONS**.
   a. At the end of its Activation, you can say that a model that is carrying a crate will either drop it or hand it to a friendly model that is within 1", or you can choose to Destroy Crate or Draw Supplies from the crate as described below. When a model drops the crate, place it within 1" of the model and not in contact with any other models. When a model hands the crate on, place the Supply Crate Marker in contact with the other model's base.
   b. If a model carrying a crate is taken Down or Out of Action, or it is chosen as the target of a Melee Attack, it immediately drops the crate as described above.
   c. If a model carrying a crate finishes its Activation wholly within its own Deployment Zone, it can escape with the crate; remove the model and the Supply Crate Marker from the battlefield (see Victory Points). The model is still considered part of the Warband for the purposes of Morale Checks.
2. Destroy Crate: Take a Success Roll for the model. If the roll is a Failure, nothing happens. If the roll is a

Success or a Critical Success, the Supply Crate Marker is destroyed (remove it from the battlefield).

3. Draw Supplies: Take a Success Roll for the model. If the roll is a Failure, nothing happens. If the roll is a Success or a Critical Success, place a **BLESSING MARKER** next to the model and the crate is emptied (remove it from the battlefield).

REINFORCEMENTS

Starting from the second Turn, after the Initiative has been determined, in order of Initiative each player can deploy up to 3 of their reserve models wholly within their own Deployment Zone.

GAME LENGTH

This scenario lasts four Turns.

VICTORY CONDITIONS

A player wins this scenario immediately if all the opposing Warbands have fled (typically due to failing a Morale Check). Otherwise, the player with the most Victory Points at the end of the game is the winner.

Victory Points

- At the end of the game, each player scores:
  - 1 VP for each Glorious Deed they completed.
  - 1 VP for each crate a friendly model drew supplies from.
  - 2 VPs for each crate a friendly model destroyed.
  - 3 VPs for each crate a friendly model escaped with.

GLORIOUS DEEDS

- Lord of War: A friendly model takes 2 enemy models Out of Action with Melee Attacks in a single Turn.
- Protect the Supplies: A friendly model causes an enemy model that is carrying or within 1" of a Supply Crate Marker to be taken Out of Action.
- Rampage: A friendly model destroys two Supply Crate Markers.
- Reaper: A friendly model takes 3 enemy models Out of Action.
- Sniper: A friendly model takes an enemy **ELITE** model Out of Action with a Ranged Weapon Attack that has the Long Range and Cover modifiers.
- Suicidal Bravery: A friendly model successfully charges 2 models with the same charge move.
- Supply Run: Two friendly models escape with a crate. The model that escaped with the second crate is credited with completing this Glorious Deed.

Brothers in Arms

Two pairs of allied Warbands battle for control of an important stretch of No Man's Land.

MULTIPLAYER SCENARIO

Brothers in Arms is a multiplayer scenario that can be played by four players.

FORCES

No special restrictions apply to the models the players can include in their Forces in this scenario.

Battle Teams

After the players have picked their Forces, they must split into two Battle Teams, each comprising two of the Warbands. At the end of the game, the players from the Battle Team that has the most Victory Points are the joint winners of the game, and their opponents are the joint losers.

The players can either agree which Warbands will be in each Battle Team, or they can make a draw, and the Warbands for the player who wins and the player who comes second will go in one of the Battle Teams, while the players who come third and fourth go into the other Battle Team.

Models belonging to the same Battle Team are treated as friendly models, while models belonging to the opposing Battle Team are enemy models. The only exception to this is that Abilities, Battlekit, and Skills that can be used to affect a friendly model can only be used on models that belong to the same Warband; they cannot be used to affect models from the other Warband on their Battle Team.

Alignment (optional)

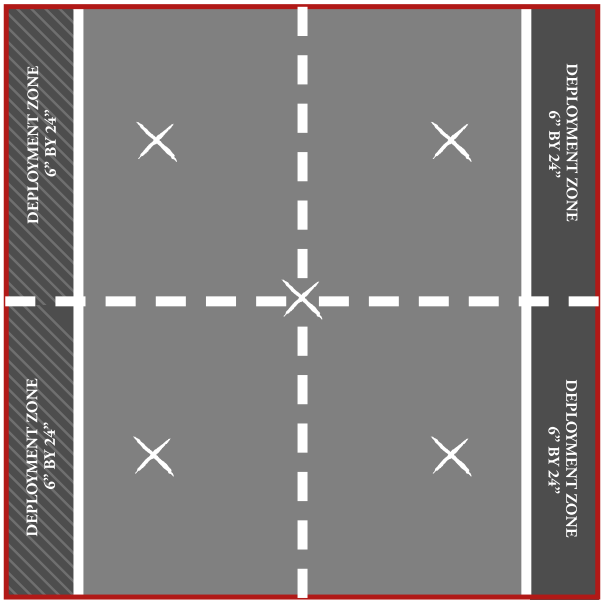

Before the game starts, the players can agree that Battle Teams can only be formed between Warbands that have the same alignment.

THE BATTLEFIELD

The players make a draw, and the winner sets up the terrain for the game. This scenario uses the No Man's Land battlefield archetype and requires a battlefield that is 48" by 48".

Objective Markers

The Markers shown on the map represent important objectives. One Objective Marker is located at the centre of the battlefield and one is located at the centre of each of the four quarters of the battlefield, as shown on the map. When you set up the terrain pieces for this scenario, you must place the first 5 terrain pieces so that they are covering the locations where the Objective Markers will be set up. In addition, you must use Ruined Building terrain pieces if you have them available. The Objective Markers are set up after all the terrain. Place each Objective Marker anywhere on the terrain piece that covers its starting position; the whole of the terrain piece is treated as the Objective for this scenario.

Controlling Objectives

A Battle Team controls an Objective terrain piece if there are more friendly models than enemy models on, in, or within 1" of the terrain piece. If one Battle Team has any models on or in the terrain piece and the other Battle Teams does not, then the Battle Team with models on or in the terrain piece controls it even if the other Battle Team has more models within 1" of the Objective.

DEPLOYMENT

The players make a draw. The winner of the draw chooses which half of the battlefield their Battle Team will deploy in. The opposing Battle Team will deploy on the opposite pair of Deployment Zones.

The player who won the draw then picks which of the two Deployment Zones in their half of the battlefield will be theirs and deploys their Warband so that all the models are wholly within the Deployment Zone. Then the player who came second in the draw chooses an empty Deployment Zone in their half of the battlefield and deploys their Warband, and so on. When all the players have deployed, the first Turn of the game can start.

GAME LENGTH

This scenario lasts four Turns.

VICTORY CONDITIONS

A Battle Team wins this scenario immediately if both opposing Warbands have fled (typically due to failing a Morale Check). Otherwise, the players from the Battle Team with more Victory Points at the end of the game are the winners.

Introduction

Victory Points

- At the end of each Turn, each Battle Team scores 2 VPs for each Objective they control.
- At the end of the game, each Battle Team scores 1 VP for each Glorious Deed they completed.

GLORIOUS DEEDS

- Bloodletting: An attack made by a friendly model results in the sixth **BLOOD MARKER** being placed beside an enemy model.
- Cast Them Down: A friendly model causes an enemy model to Fall from a height of at least 3" (e.g. by taking the enemy model Down near a ledge, or by forcing it off a ledge in some way).
- Hold Your Ground: A Warband is the first to pass a Morale Check in this game. You receive a Victory Point for achieving this Glorious Deed. In a campaign game you can award 1 Experience Point to **1 ELITE** model from the Warband that has the **LEADER** Keyword if you have one available, and you receive Glory Points and an extra D6 for your Promotion Pool as you would normally.
- Lord of War: A friendly model takes 2 enemy models Out of Action with Melee Attacks in a single Turn.
- Resist and Bite: A friendly model that began its Activation Down takes an enemy model Out of Action in the same Activation.
- Sniper: A friendly model takes an enemy **ELITE** model Out of Action with a Ranged Weapon Attack that has the Long Range and Cover modifiers.
- Suicidal Bravery: A friendly model successfully charges 2 models with the same charge move.

Alliance & Betrayal

Several Warbands converge on the same battlefield. Alliances are quickly formed and then broken as the Warbands try to dominate the heart of the battlefield.

MULTIPLAYER SCENARIO

Alliance & Betrayal is a multiplayer scenario that can be played by three or four players.

CARD DECKS

To play this scenario, you will need 2 decks of cards. Each deck will need to have a different-coloured back or be of a different shape or size so you can tell them apart. One of the decks is used when cards are used to make a draw or determine the Initiative, as described in the rules for Multiplayer Games on page @@. The other deck is called the Betrayal Deck.

At the start of the game, take the Aces from the Betrayal Deck, shuffle them, and deal one face up to each player. This card shows the player's card suit. If you are playing a three-player game, discard the remaining Ace; it will not be used in this game.

Then take the remaining cards from the Betrayal Deck, shuffle them, and place them face down in easy reach of all of the players. If the Betryal Deck is exhausted, take any discarded Betryal cards apart form the aces, shuffle them together, and place them facedown to create a new deck.

FORCES

No special restrictions apply to the models the players can include in their Forces in this scenario.

THE BATTLEFIELD

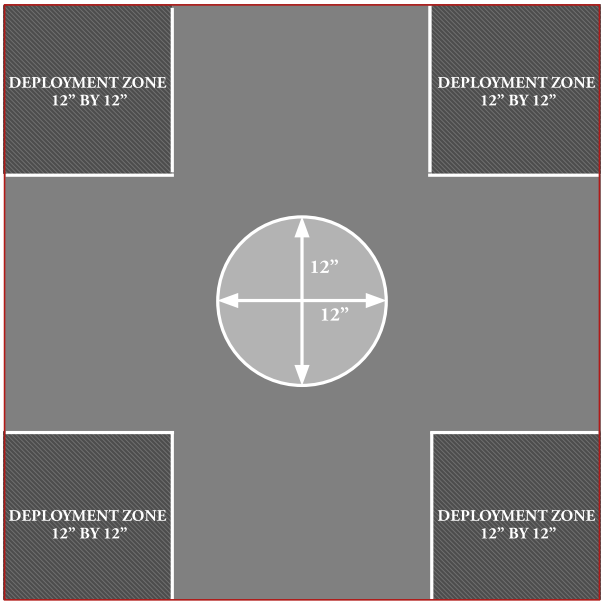

The players make a draw, and the winner sets up the terrain for the game. This scenario uses the Decimated Ruins battlefield archetype and requires a battlefield that is 48" by 48". Impassable terrain cannot be set up within 6" of the centre of the battlefield.

DEPLOYMENT

The players make a draw. The winner of the draw chooses which Deployment Zone will be theirs and places the Ace they were given face-up beside it so that everyone knows the player's card suit. They then deploy their Warband so that all the models are wholly within the Deployment Zone. Then the player who came second chooses a Deployment Zone, reveals their card suit and deploys their Warband, and so on. When all the players have deployed, the first Turn of the game can start.

Infiltrators

Infiltrators must deploy normally (they cannot use their special deployment rules).

BETRAYAL CARDS

After the Initiative for the Turn has been determined, the players are allowed to draw Betrayal Cards. These cards allow a player to carry out nefarious coups and ruses during the game.

Betrayal Cards are drawn from the Betrayal Deck. Players can look at the cards they draw and are allowed to keep them secret from the other players. The number of cards each player draws depends on the number of Victory Points they have scored so far in the game:

- If they have more Victory Points than every other player, they get 1 card.
- If they have fewer Victory Points than every other player, they get 3 cards.
- Otherwise, they get 2 cards.

Players can get extra Betrayal Cards during a Turn in the following circumstances:

- A player gets 1 extra card at the end of the Alliance Period if they are not allied with any other players and no other players are allied with them (see the Alliance Period).
- A player gets 1 extra card if they roll a 2 or a 12 for a Success Roll before any modifiers or re-rolls are taken.

Using Betrayal Cards

Betrayal Cards can be used in one of two ways; either to carry out a coup or a ruse. Cards that a player holds that match their card suit are used to carry out a coup; other cards can be used to carry out a ruse.

For example, if your card suit is Clubs and you draw the 3 of Clubs, you can use the card to carry out a coup. If you had drawn the 3 of Diamonds, you could use the card to carry out a ruse.

To determine exactly what each card allows you to do, look it up on the Betrayal Table that you can find at the end of this scenario. The table explains when you can use a card and what effect it has when it is used to either carry out a coup or a ruse.

Trading Cards

You can trade your Betrayal Cards with another player at any time. For example, you could swap a card with an opponent so that you each get a card that you want, or you could use them to bribe another player into forming an alliance, or you could give a card to another player to help the player with an attack they are making, and so on.

THE ALLIANCE PERIOD

After any Betrayal Cards are drawn at the start of the Turn, the players have a 3-minute period of play to create and form alliances. At the end of the 3-minute period, each player can secretly write down the name of one other Warband (you can use the Warband's card suit if you wish). You do not have to write down anything if you do not wish to.

Then, the names the players wrote down are all revealed simultaneously. A player who has written down a name is in an alliance with that Warband for the rest of the Turn. If two players allied with each other, then they are said to be in a "joint alliance" for the rest of the Turn. Play then proceeds to the Betrayal Cards phase.

Alliance Effects

An alliance has the following effects:

- A player cannot choose a model from a Warband they are allied with as the target for an attack (even if the other Warband is not allied with them in return).
- Models that are from a Warband that are in a joint alliance can move within 1" of each other.
- Models that are in a joint alliance can treat models from the other Warband as friendly models when they use an Ability, Battlekit, or Skill.
- A player who is not in an alliance receives 1 extra Betrayal Card at the end of the Alliance Period (see Betrayal Cards).
- Each player in a joint alliance receives 1 Victory Point at the end of the Turn (see Victory Points).

Alignment (optional)

Before the game starts, the players can agree that alliances can only be formed between Warbands that have the same alignment. If even one player objects to this, or if the players forget to discuss alliances before the game has started, then alliances can be formed between any Warbands.

Double-dealing

You do not have to honour any verbal agreements you make during the discussions. This means you can trick an opponent into allying with your Warband but not allying back in return, which will mean they cannot attack your models, but you can attack theirs. Just keep in mind that anyone who is tricked in this way will try to get their revenge on you later in the game!

GAME LENGTH

This scenario lasts five Turns.

VICTORY CONDITIONS

A player wins this scenario immediately if all the opposing Warbands have fled (typically due to failing a Morale Check). Otherwise, the player with the most Victory Points at the end of the game is the winner.

Victory Points

- At the end of each Turn, each player scores:
  - 1 VP if they are in a joint alliance (see Alliance Period).
  - 1 VP for each attack made by a friendly model that took an enemy model Out of Action.
  - 2 VPs if they have any models within 6" of the centre of the battlefield.
  - 3 VPs if they have more models within 3" of the centre of the battlefield than any other players (in addition to the points for having any model within 6" of the centre of the battlefield).
- At the end of the game, each player scores 1 VP for each Glorious Deed they completed.

Victory Point Bribes

In this scenario, players can give 1 or more of the Victory Points they have scored so far to another player. They can do this at any time and for any reason, but once the points have been transferred to another player, they do not have to be returned if the other player fails to deliver on any deals that have been made. Victory Points that are used as bribes in this way are removed from the player's score and added to the score of the player who they gave them to.

You may want to keep track of Victory Points using poker chips or paper money from a game like Monopoly, so that players can easily hand over a bribe to another player.

GLORIOUS DEEDS

- Backstabber: A friendly model takes an enemy model Out of Action and the enemy model is currently allied with the attacking model's Warband.
- Capture: A friendly model starts and ends a Turn standing at the centre of the battlefield.
- Death From Above: A friendly model takes an enemy model Out of Action with a Melee Attack that has the Diving Charge modifier.
- Lord of War: A friendly model takes 2 enemy models Out of Action with Melee Attacks in a single Turn.
- No Escape: A friendly model successfully charges an enemy model that it did not have a Line of Sight to at the start of its Activation.
- Reaper: A friendly model takes 3 enemy models Out of Action.
- Sniper: A friendly model takes an enemy **ELITE** model Out of Action with a Ranged Weapon Attack that has the Long Range and Cover modifiers.
- Suicidal Bravery: A friendly model successfully charges 2 models with the same charge move.
- Trickster: A friendly model takes an enemy model Out of Action and a Betrayal Card was used to influence the outcome of the attack.

Betrayal Table

THE BETRAYAL TABLE

Betrayal Cards have the following effects. Use the Coup column if the suit of the card matches the player's card suit. Otherwise, use the Ruse column.

Card Value	COUP	RUSE
2	**Counter:** Play this card when a friendly model is chosen as the target of a Melee Attack. The friendly model carries out the Attack instead of the enemy model.	**Misdirection:** Play this card when a model is chosen as the target of a Ranged Attack. You pick a new target for the Ranged Attack (the target cannot be from the attacking model's own Warband).
3	**Power Play:** Play this card when a player announces an alliance. They must pick you as their ally instead.	**Tripwires:** Play this card when an enemy model is about to move. Its Movement Characteristic is halved for the move.
4	**Coup de Grâce:** Play this card efore a friendly model takes a Melee Attack on a model that is down and has 3 or more **BLOOD MARKERS**. The target is taken Out of Action (do not take a Success Roll for the attack).	**Revenge:** Play this card after a friendly model is taken Out of Action by an enemy attack. The attacking model becomes a prime target for all of your models. For the rest of the turn, add **+2 DICE** to Success Rolls and Risky Success Rolls for attacks made by friendly models on that model model.
5	**Saboteur:** Play this card when an enemy model is about to move. Its Movement Characteristic is halved for the move.	**Bad Luck:** Play this card before a player takes a Success Roll or a Risky Success Roll. Add **-1 DICE** to the roll.
6	**Oh No You Don't:** Play this card before an enemy model takes a Retreat **ACTION**. The **ACTION** is cancelled and the enemy model's Activation ends.	**Valuable Lives:** Play this card at the end of a Turn. For every friendly model taken Out of Action on that Turn, your warband gains 10 Ducats.
7	**Hesitation**: Play this card when an enemy model takes a Charge **ACTION**. The **ACTION** is cancelled and the enemy model's Activation ends.	**Malediction:** Play this card before you make an Injury Roll for an enemy model. Add **+2 INJURY DICE** to the roll.
8	**Double-cross:** Play this card at any time if you are in an alliance. You are no longer allied with the player you wrote down.	**Bribe:** Play this card at any time to give another player 1 Victory Point.
9	**Triple-cross:** Play this card at any time if you are in an alliance. You are no longer allied with the player you wrote down. Then pick another player who is not in an alliance. You and that player are in a joint alliance for the rest of the Turn.	**Bribe:** Play this card at any time to give another player 1 Victory Point.
10	**Con:** Play this card at any time if you are in a joint alliance with a player who has 1 or more Victory Points. You steal 1 of their Victory Points and the alliance is broken.	**Large Bribe:** Play this card at any time to give another player 2 Victory Points.
Jack	**Sure Thing**: Play this card when a player takes a Success Roll or Risky Success Roll. Add **+3 DICE** to the roll.	**Good Luck:** Play this card when a player takes a Success Roll or Risky Success Roll. Add **+1 DICE** to the roll.
Queen	**Flee!:** Play this card before a player takes a Morale Check. The Morale Check is failed (do not roll the dice).	**Hold On!:** Play this card after a player you are allied with fails a Morale Check. They can re-roll the Morale Check.
King	**Greedy Bastard:** Play this card at the end of a Turn if you are in a joint alliance. You get 2 Victory Points instead of 1 from this alliance, and the other player gets none.	**Inglorious:** Pick an enemy model. That model cannot complete any Glorious Deeds for the rest of the game.
